

Cylance® is transforming the cybersecurity industry with proactive and preventive products and services. Headquartered in Irvine, California, and founded in July 2012 by a distinguished team of industry professionals and scientists, the company is redefining the enterprise endpoint standard of protection by preventing threats from ever executing. Cylance investors include DFJ Growth, KKR, Dell Ventures, Capital One Ventures, TenEleven Ventures, ThomVest, Draper Nexus, Blackstone, Khosla Ventures and Fairhaven Capital.

Cylance's next-generation endpoint threat prevention product, CylancePROTECT®, is the only technology that completely eliminates the need for traditional antivirus software, anti-exploit products, whitelisting solutions and host-based intrusion detection and prevention systems. CylancePROTECT's transformational detection and blocking is based on a radically different technological approach to cybersecurity. Unlike reactionary signature, heuristics and behavior monitoring, which require an Internet connection, Cylance applies artificial intelligence to analyze a file's characteristics and predict whether it is safe or a threat prior to the file executing on the local host.

CylancePROTECT is a simple, lightweight agent that offers complete protection from system- and memory-based attacks, spear phishing, zero-day malware, privilege escalations, scripts and malicious and potentially unwanted programs, all without the high false positive rates, operational overhead and management complexity of other solutions. With CylancePROTECT, it's now possible to set and meet much higher standards for endpoint security. We stop the threats that others can't.

Complementing Cylance's revolutionary technology product is a set of professional services that provide pre-attack penetration and vulnerability testing, compromise assessments and post-attack incident response. Cylance's seasoned team of experts also offers specialized consulting in the areas of threat modeling, industrial control systems, medical devices, as well as point of sale and other embedded systems.

Cylance's cyberthreat expertise includes a SPEAR™ (Sophisticated Penetration, Exploitation, Analysis and Response) research team that makes it more difficult for threat actors to get away with malicious operations. The SPEAR team investigates various software, applications, infrastructures and systems to expose and disrupt hackers. Cylance's SPEAR team produced the report that helped shut down one of the largest Iranian cyberattack campaigns uncovered to date.

Cylance has designed a holistic, preventive security approach that combines technology, people and process to reduce the surface area of attacks and stop malware at the most vulnerable point of entry - the endpoint.

## Senior Technical Executives

---

### Stuart McClure

Chief Executive and  
Co-Founder

### Ryan Permeh

Chief Scientist and  
Co-Founder

### Glenn Chisholm

Chief Technology  
Officer

### Malcolm Harkins

Global Chief Information  
Security Officer

## Board of Directors

---

### Stuart McClure

Cylance

### Art Coviello

Rally Ventures

### Alex Doll

TenEleven Ventures

### Mark Bailey

DFJ Growth

### Jim Goldinger

Fairhaven Capital

### Patrick Heim

Head of Trust and Security, DropBox

### Bruce Armstrong

Khosla Ventures

### Alex Weiss

ClearSky Power & Technology Fund

### Hiro Ria Maeda

Draper Nexus

## About Cylance:

---

Cylance is the first company to apply artificial intelligence, algorithmic science and machine learning to cybersecurity and improve the way companies, governments and end-users proactively solve the world's most difficult security problems. Using a breakthrough predictive analysis process, Cylance quickly and accurately identifies what is safe and what is a threat, not just what is in a blacklist or whitelist. By coupling sophisticated machine learning and artificial intelligence with a unique understanding of a hacker's mentality, Cylance provides the technology and services to be truly predictive and preventive against advanced threats.
